

Travel Data Suite

Travel Data Suite — the Corporate Travel Data Product Package

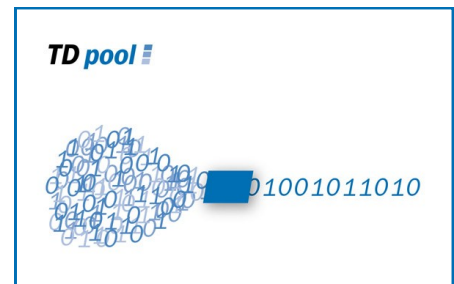

Travel Data Suite represents our product portfolio for the business travel industry. This component-based system allows us to provide individual services to our customers according to their needs — data consolidation, document management, reporting possibilities, locating travellers or data forwarding. The components of the **Travel Data Suite** offer solutions for all travel management areas.

Travel Data Suite — Components

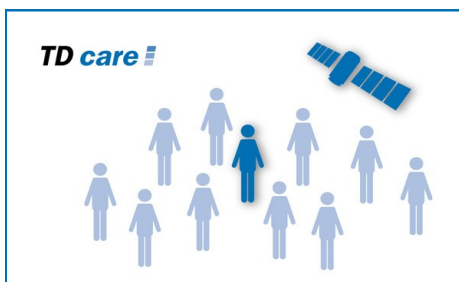

TD pool — Booking Data Collection

TD pool is our cache for data consolidation of our customer's booking data. PNR data from all common Global Distribution Systems (GDS) as well as data from Online Booking Engines (OBEs) can be collected. Additionally, **TD pool** offers the possibility to import and forward data from direct links such as credit card or human resource data, or from manual travel data inserted using a web platform. **TD pool** strives to completely meet our customers' needs for collecting, maintaining and quality-controlling their data.

Target Group: Travel Management, Human Resources, Crisis Management or third parties

TD care — Personal Travel Data and Traveller Locator

TD care makes personal business traveller information available such that our customers can locate their worldwide travellers at all times — before, during and after the trip. Component users can easily email or text message their business travellers. Our customers use **TD care** for efficient crisis management.

Target Group: Travel Management, Human Resources, Crisis Management or third parties

Travel Data Suite — the Corporate Travel Data Product Package

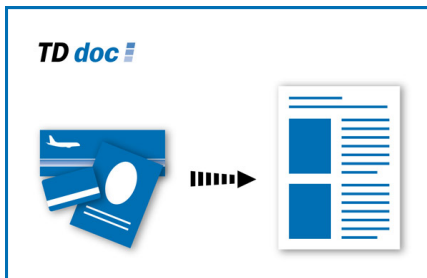

TD chart — Reporting for Travel Management

Our reporting tool **TD chart** enables customers to display spontaneous or standard requests from their collected **TD pool** travel data. Results can be viewed online or exported.

Target Group: Travel Management, Finances, Procurement or third parties

TD doc — Travel Information and Company-Specific Data in one Document

TD doc redistributes corporate travel data in a professional manner. This allows our customers to use all of their booking data from **TD pool** to generate individual itineraries that can also be supplemented with company-specific data. The documents can be distributed through all common communication channels, such as email, text message or fax.

Target Group: Travel Management

TD hub — Connects Processing Systems

TD hub lets our customers connect all or part of their data to further processing systems (e.g. for the initiation of travel expense accounting). Outbound data is flexible; it can be processed in different formats and sent at different times.

Target Group: Travel Management, Human Resources, Finances, Accounting, Procurement or third parties
